

KR Scarifiers

KR13 Scarifier: "Heavy Duty" is this machine's middle name

The KR13 (13-inch cutting path) is the epitome of heavy-duty scarifier machinery. It offers approximately 423 pounds (with drum) of centrally located quality engineering that refuses to "jump out of the cut." It is offered in three models: The 11-horsepower gas-driven, the 13-horsepower gas-driven and the 5-horsepower electric.

Like most of the Kut-Rite scarifier line, the KR13 features a laser-cut tab design, zero-depth height adjustment, better balance and less vibration, a side-access drum assembly, swiveling vacuum port, emergency stop, induction-hardened hex shafts, sealed bearings and toothed belts.

Featured accessories are **Carbide (TCT), Full Face, Milling and Steel cutters, scarifier drums and shafts** and **Klean-Rite™ vacuum units**.

KR8HD Scarifier Drum Loaded with Steel Cutters

Part Number	924-000-G0	924-001-0
Model	KR13 Gas Scarifier	KR13 Electric Scarifier
Power Source	Gas	Electric
Power Specs	Honda 11HP	240/480 1/3PH 13/6FLA
Cutting Path	13"	13"
Weight	423lbs	436lbs

Full Face Carbide Cutters

Carbide-tipped scarifier cutters, including the "Next Generation" KRXVI Scarifier Cutter, will provide a surface like no other cutter available on the market today. The Kut-Rite Full Face Cutter incorporates three times the amount of carbide than standard carbide-tipped cutters, along with Kut-Rite's patent pending Key-Lock system. The Full Face cutter allows for 100 percent removal of surface material with minimum damage to the substrate. Utilize the Full Face Cutter for traffic line removal, epoxy removal, thermoplastic removal, cold plastic coatings removal and general scarification. Extremely long lasting, Full Face Cutters remove all types of materials and leaves any finish desired with virtually invisible witness marks. Minimizes changeover time and fits all machines. NOTE: In addition, the KR16PT Full Face Cutter replaces diamond cutting for inlays, and has no issues with hard or soft concrete and no need for water. The surface left behind is smooth, profiled and ready for applications.

Tungsten Carbide Tipped (TCT) Scarifier Cutters:

Standard carbide cutters offer extreme grinding, leveling, grooving, cleaning and general surface preparation. The standard carbide tip cutter is a very aggressive cutter designed for all heavy-duty scarifying purposes, including roughening of concrete or asphalt, trip hazard removal, cleaning of stone surfaces, concrete grooving, aggressive milling of concrete and traffic line removal. Carbide cutters last longer than standard cutters, cut down on changeover time, work best on hard surfaces, leave a slightly rough, contoured surface and fit all machines.

Steel Scarifier Cutters:

Steel Cutters are the most economical tools in the market, and leave a long-lasting smooth finish. They are ideally used on lighter preparation work while getting ready for coating applications or removal of surface materials like carpet foam backing, adhesives, mastics, glues, rust from steel decks and some thin mill coatings. Good for general cleaning of concrete and asphalt surfaces, traffic line removal, paint and light coating removal, adhesives removal, stripping of compacted dirt, grease and oil deposits and de-rusting, de-scaling and ship decks. Available in blunt or sharp tooth configurations and fits all machines.

Milling and Routing Cutters:

Kut-Rite Scarifier Milling Cutters are utilized for removing thick and soft materials such as mastic, thermoplastic, waterproofing membranes, cold plastic coatings, glues and the like. It leaves the surface smooth and ready for preparation, and is often used to remove the bulk of material prior to using a carbide-tipped cutter. Utilize the Milling Cutter for traffic line removal, epoxy removal, thermoplastic removal, waterproofing membrane removal, cold plastic coatings removal and general scarification. Long lasting, removes all types of materials and leaves a smooth finish. Fits all machines.

Kut-Rite
No matter how you *kut* it.
