## KR Scarifiers

## TKO-2513 Hydraulic Scariffer: The most powerful in its class

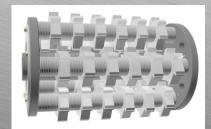

The Kut-Rite TKO-2513 Hydraulic Scarifier Attachment is the most powerful scarifier/planer on the market. Combined with a skid steer machine, the TKO-2513 weighs in at 476 pounds (with drum) and is fully equipped with a bi-directional hydraulic motor. This machine should be considered for extremely fast surface preparation, heavy removal of concrete, asphalt, thermoplastic lines, paints, coatings, trowel marks, curled joints, sidewalk trip hazards and the like.

The TKO-2513 features a long-life bi-rotational hydraulic motor that produces an up or down cut. The scarifier head never leaves the surface while cutting in forward or reverse, which increases production rates by 50 percent. A quad-spring suspension offers constant ground contact in uneven areas. Its attachment is configured for most popular skid steers.

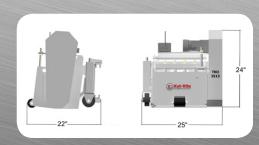

A precision depth control remembers your cutting depth until you change it. A quick attach mounting plate and QD hydraulic lines offer complete tool changes in 90 seconds. It also has a vacuum hose port and optional diamond tooling packages are available.

Featured accessories are Carbide (TCT), Full Face, Milling and Steel cutters, scarifier drums and shafts and KleanRite™ vacuum units.

**TKO-2513 Scarifier Drum Loaded with Milling Cutters** 

Part Number	9888.00.00.005
Model	TKO-2513 Hydraulic Scarifier
Power Source	Hydraulic
Power Specs	13-15GPM at 2500-3000psi
Cutting Path	13"
Weight	476lbs

Carbide-tipped scarifier cutters, including the "Next Generation" KRXVI Scarifier Cutter, will provide a surface like no other cutter available on the market today. The Kut-Rite Full Face Cutter incorporates three times the amount of carbide than standard carbide- tipped cutters, along with Kut-Rite's patent pending Key-Lock system. The Full Face cutter allows for 100 percent removal of surface material with minimum damage to the substrate. Utilize the Full Face Cutter for traffic line removal, epoxy removal, thermoplastic removal, cold plastic coatings removal and general scarification. Extremely long lasting, Full Face Cutters remove all types of materials and leaves any finish desired with virtually invisible witness marks. Minimizes changeover time and fits all machines. NOTE: In addition, the KR16PT Full Face Cutter replaces diamond cutting for inlays, and has no issues with hard or soft concrete and no need for water. The surface left behind is smooth, profiled and ready for applications.

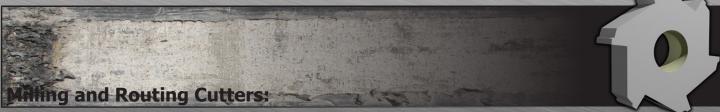

Standard carbide cutters offer extreme grinding, leveling, grooving, cleaning and general surface preparation.

The standard carbide tip cutter is a very aggressive cutter designed for all heavy-duty scarifying purposes, including roughening of concrete or asphalt, trip hazard removal, cleaning of stone surfaces, concrete grooving, aggressive milling of concrete and traffic line removal. Carbide cutters last longer than standard cutters, cut down on changeover time, work best on hard surfaces, leave a slightly rough, contoured surface and fit all machines.

## Steel Scarifier Cutters:

Steel Cutters are the most economical tools in the market, and leave a long-lasting smooth finish. They are ideally used on lighter preparation work while getting ready for coating applications or removal of surface materials like carpet foam backing, adhesives, mastics, glues, rust from steel decks and some thin mill coatings. Good for general cleaning of concrete and asphalt surfaces, traffic line removal, paint and light coating removal, adhesives removal, stripping of compacted dirt, grease and oil deposits and derusting, de-scaling and ship decks. Available in blunt or sharp tooth configurations and fits all machines.

Kut-Rite Scarifier Milling Cutters are utilized for removing thick and soft materials such as mastic, thermoplastic, waterproofing membranes, cold plastic coatings, glues and the like. It leaves the surface smooth and ready for preparation, and is often used to remove the bulk of material prior to using a carbide-tipped cutter. Utilize the Milling Cutter for traffic line removal, epoxy removal, thermoplastic removal, waterproofing membrane removal, cold plastic coatings removal and general scarification. Long lasting, removes all types of materials and leaves a smooth finish. Fits all machines.
